

Children's Feet Protection

General rules of use

- The shoes should be unlaced while putting them on and taking them off
- Do not let your shoes get soaked
- Once shoes are wet or sweaty, they should be dried at room temperature away from a direct heat source. Shoes should be unlaced and stuffed with shoetree or paper towels, which will prevent them from becoming deformed. Even properly maintained year-round shoes and fall-winter shoes with grain upper may soak through after 20 minutes of heavy rain.
- Nubuck and velour shoes are less resistant to soaking through.
- Shoes cannot be washed in a washing machine – hot water, detergents and the spinning can damage the shoes and strongly affect their look and durability.
- Shoes should be changed everyday. It will help with the moisture removal.
- The shoes should be used for their intended purpose.
- Shoes cannot be too large.

Attention?

In order to perform their diagnostic corrective and prophylactic functions, the shoes cannot be too large. When choosing footwear, make sure it fits properly.

See our website Footwear Measurement Guides (under Guides in the orange banner at the top of the Well & Able website) for assistance.

Leather shoes cleaning and conditioning

Clean your shoes and use shoe polish according to colour and material of the upper. When the leather absorbs the shoe polish, buff shoe surface with soft cloth or soft brush until it shines.

Nubuck/velour shoes & cleaning and conditioning

Clean your shoes and then apply protective spray according to the colour. Do not use shoe polish or shoe cream.

Warranty & Claims

- See the Returns Policy at the bottom of the Well & Able website.
